

Every ingredient has a purpose.

Ticked Off! Tick and Flea Repellent offers you and your dog or cat all natural, chemical-free relief from fleas, ticks, mosquitoes, gnats and other disease-carrying biting insects.

Ticked Off is a contact killer. If your pet is infested, you will need to coat the animal thoroughly, paying attention to the feet, legs, underbelly, neck, tail and groin as well as the top area of the pet. Use the product liberally, making the animal wet to the skin with the solution. The bugs will not die unless they come into direct contact with Ticked Off!

For fewer bugs, you can apply the product directly and they will die and fall off. How often you repeat applications depends on your pet's exposure to insects. Ticked Off! acts as a flea and tick repellent – mist liberally on the underbelly, feet and legs as preventative action.

Go ahead - walk in the tall grass! Run in the woods! Have fun and protect yourself and your pet from biting insects.
